

Please write down the answers for the following on a sheet of paper and hand in with your **name** and **block** on the sheet of paper:

1. The practice of following a moving subject with your camera while it is set on a slow shutter speed is called what?
2. Is $1/15^{\text{th}}$ of a second a longer or shorter exposure than $1/125^{\text{th}}$ of a second?
3. With a long shutter speed, or exposure, moving objects will appear to blur. How can you keep the background unblurred?
4. Where is the shutter speed dial found on the camera?
5. What does the letter "B" stand for on the shutter speed dial?
6. What is the slowest shutter speed you should use without a tripod?
