

Family Portrait

For this project, you will be documenting your family, both indoors and out. The learning outcome of this project is to become comfortable with the operation, of portable strobe units.

As well, it allows you to work with subjects that you are comfortable with as a way of learning how to pose and speak to models.

You will be submitting to me a minimum of **five** photographs for marking. One photo should be taken in your home, and will ideally include yourself (you will need to use a self timer or remote to actuate the shutter.)

The second photo will be taken outdoors. I would like you to pay special attention to what time of day you choose to photograph during, (sunrise and sunset are particularly dramatic) and what the surroundings are.

You may consider your backyard; you may consider a park, or the beach.

You may use as few as one speedlight, up to as many as 3. Please consider the use of light stands and umbrellas.

You will definitely want to study the “Flash Project” assignment to familiarize yourself with the use of speedlights.
